

Kaohsiung New Town: Town Center

Taiwan

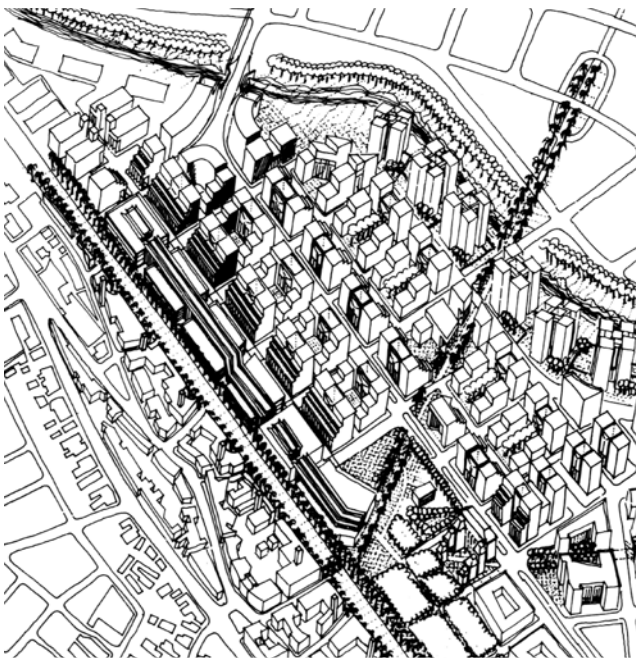

台湾高雄市新城中心规划及城市设计

CLIENT:

Transpacific International Corporation and Shih Lin Engineering Consultant Co. for the Construction and Planning Administration, Ministry of Interior

KSK prepared a conceptual development plan for a mixed-use, transit-oriented, town center for a new town of 300,000 people in Taiwan. The town center joins an existing, traditional shopping and commercial corridor along Old Route 1 in Chiaotou with new high-density development along a central transit boulevard. The town center features retail, offices, residential, and services, and high technology “incubator” office and laboratory space linked to a technical university.

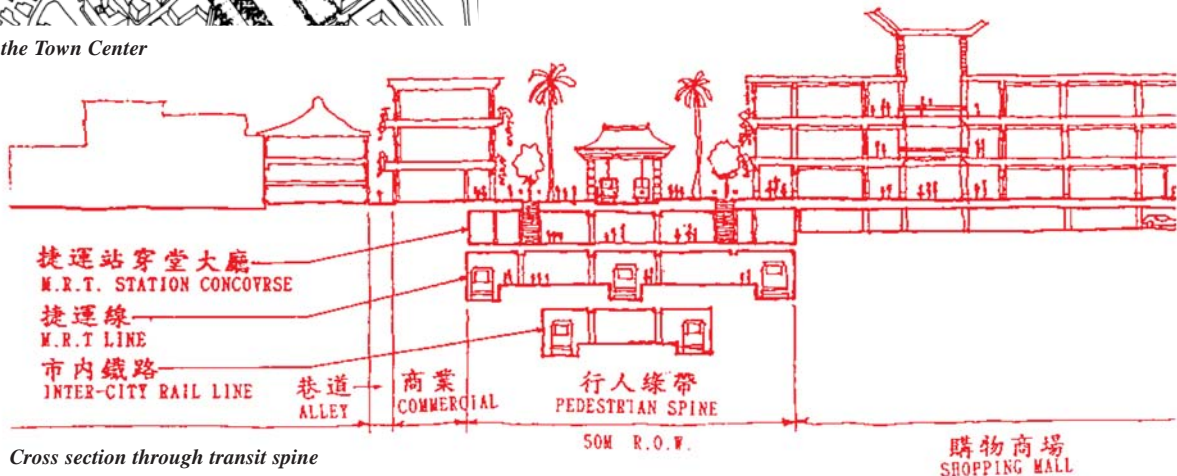

The transit boulevard is anchored at one end by an inter-city train station and department store, and at the other end by a central park. Below the boulevard is a train line and station that links the town center to the national capital, Taipei.
