

# Sarasota Historic Resources Survey

Sarasota, FL

**CLIENT:**  
City of Sarasota

KSK conducted a survey of nearly 900 resources for the City of Sarasota. The process included a review of previous surveys, historical research, identification and recordation of resources, analysis and evaluation of survey data, development of historic contexts, GIS mapping, and preparation of Florida Master Site File forms. Each resource was assessed for both local and National Register eligibility. A Microsoft Access database was prepared that summarized project recommendations and was configured to link to the City's existing GIS data. KSK also performed an ordinance review and provided recommendations to ensure that local statutes support the City's desire to protect archaeological resources.
